

Wolf Trax Cropmix DDP

A convenient micronutrient blend for early crop growth

Why Wolf Trax DDP Micronutrients?

- √ Innovative, patented formulation
- √ Better blend consistency
- √ Even distribution across the field
- √ Earlier uptake
- √ High quality
- √ Flexible and Convenient

Wolf Trax® Cropmix DDP is a blend of DDP Micronutrients designed to aid in crop establishment and early plant growth. Cropmix DDP is made up of Zinc DDP, Manganese DDP, Boron DDP, Copper DDP, and Iron DDP in ratios designed to promote early growth¹. Cropmix DDP is designed for ease of use and convenience, saving fertilizer blenders valuable time in adding different micronutrients to the blend. Cropmix DDP is a great addition to the line-up of original DDP Micronutrients, which can still be used alone, or in different ratios to create custom blend solutions for growers.

Guaranteed analysis:

Manganese	18%
Zinc	17%
Boron	2%
Copper	1%
Iron	1%

Instructions for use: Cropmix DDP may be used as a coating on all fertilizer blends (including urea or urea blends). It is not recommended for foliar applications.

Recommended rate: 2 to 5 lbs/ton

All DDP® brand Micronutrients represent innovative, patented technology. When blended with dry fertilizer, the Wolf Trax unique formulation and micro-static adhesion ensures the micronutrients thoroughly coat each and every prill of the fertilizer blend. Consistent fertilizer blends are maintained throughout blending, and handling, resulting in an even blanket of application to the field.

You and Wolf Trax....Growing Forward® together.
